

Let's Camp September 2022 Release Notes

Usability Tweaks & Bug Fixes:

- The promo code type “free” now has check-boxes to include the booking fee and add-ons.
- The promo code type “free nights” no longer shows the options to include booking fee and add-ons. (These were never options for this promo code type; it just displayed those options as “no”, which caused confusion)
- Fixed a bug where a campground admin disabling one of their campground users would disable their user account for the entire website. Disabling a campground user will now only revoke their access to your specific campground.
- Revised the homepage with the following tweaks:
 - Included an “edit your booking” button to make it easier for campers to find this option.
 - Added the “find a campground near you” section that displays provinces for campers to navigate to the province search pages
 - Added a section to choose unit type, which will lead to the next search page with a filter applied for that unit type.
- Removed the ability for campground admins to manually refund a credit card without making an adjustment to the booking. This change was made to keep a paper trail of payments and refunds made and recorded.
- Fixed a bug that let admins double charge a credit card when clicking save on “edit booking” multiple times while it loaded.
- We now display an RV’s length on the booking page in the “units” field if an RV is included in the booking.
- Fixed a bug that displayed 1-night bookings as “checked out” on the day of arrival.
- Fixed a bug that displayed check-in and check-out information in a jumbled mess on certain mobile devices.
- Added messaging to the “record refund” workflows to reduce issues where campgrounds would accidentally enter incorrect refund amounts or methods.
- Fixed a refresh bug where sites would not refresh if a campground admin was trying to make or edit a booking and changed a detail such as the unit type.
- Added the ability for campground admins to price adjust the Let’s Camp booking fee. Campgrounds will still be responsible for paying this fee; this change is to accommodate campgrounds that want to give a full refund under certain circumstances and absorb the cost of the booking fee.
- Added the ability for campground admins to price adjust the non-refundable fee that’s added as a result of bookings being shortened under certain refund rules.
- Electrical service options will be hidden for any campground that doesn’t use them. For example, if a campground doesn’t have any sites with 15-amp electrical service, the 15-amp electrical filter will not display for campers when making a booking.

- Added a “book another site” button to the thank you page after a camper completes the check-out process
- Fixed a bug that would send campers back to the login screen if they pressed the “back” button during certain steps in the booking process.
- Added a spot to display check-in and check-out times on a campground’s profile page.
- Made a tweak to the availability calendar in the dashboard on mobile devices so users can scroll past the bookings without them opening as if they’ve been clicked each time.
- Fixed a bug where the subtotal for add-ons displays as 0 when a camper is adding them to a booking.
- Fixed a bug in the transaction report where certain entries were appearing on the wrong date or time.
- Fixed a bug in the sales report where certain entries were appearing on the wrong date or time.
- Made a tweak to the location field on the campground search page where it now says “enter your location” instead of “campgrounds near me” to more accurately represent how this field works.
 - Also made a tweak where the field will be “cleared” if one of the options isn’t chosen from the drop-down menu. This is to stop incorrect filters from accidentally being selected.
- Added the hoverable site numbers to the “camp map” page under general settings.

New Features:

Bulk Site Upload: Campgrounds can now use a .csv file to bulk upload site information. This feature is found under the Site Settings.

Cookie Banner: Added a cookie banner for all website users to agree to or customize.
