

# Let's Camp November 2022 Release Notes

## Usability Tweaks & Bug Fixes:

- Added background classifications necessary to develop the ability to check out multiple sites at the same time
- Added a column for the booking reference number to the add-on report
- Made a change to reduce the occurrence of users hitting error pages
- Fixed a bug that led to an error page when clicking “view bookings” in the “Grouped by sites” tab of the booking reports.
- Fixed a bug where the 24-hour grace period wouldn't take effect if the booking was created/cancelled within 1 day of checkin
- Fixed a bug that was causing the attribute icons of sites to display incorrectly
- Fixed a bug in the transaction report that was displaying certain transactions on the wrong day due to a UTC time conflict
- Added Let's Camp's refund rules & Modification of Terms policy to campgrounds' profile page
- Removed Let's Camp's terms from the checkout process
  - Replaced this checkbox by splitting a campground's refund rules from their policies so campers have to agree to them separately
- Added a spot to camper registration that says, “By registering to use Let's Camp, you agree to our privacy policy & terms of service.”
- We removed the up and down arrows on the RV length field because they were confusing some campers
- Updated “Boat length” settings for campgrounds that use boats instead of RVs to match the RV length's flexibility
- Fixed misalignment in the Campground field in the search box on the homepage
- For promo codes that have a maximum number of uses, attempting to use that code more than the max will display the error, “This promo code has exceeded its maximum number of uses”
- Fixed a bug that led to an error page if an admin pressed the “back” button after cancelling a booking.

## New Features:

**Conditional Products:** Added conditional rules options to products to allow them to appear conditionally based on these criteria:

- Unit Types
- Site Types
- Minimum Nights Booked
